***Information Disclosure Statement***

The PTOL 1449 has been received, reviewed and considered.

***Claim Rejections - 35 USC § 112***

1. Claims 43 and 50 recite the limitation "net acceptor" in lines 2 and 3, respectively. There is insufficient antecedent basis for this limitation in the claim.
- Please delete the word "the" and insert the word --a—before the words -- net acceptor--.

***Claim Rejections - 35 USC § 101***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 43-56 are rejected under the judicially created doctrine of double patenting over claims 1-39 of U. S. Patent No. 6,610,141 B2 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: Both U. S. Patent No. 6,610,141 B2 and the instant application teach a process for preparing p-n or n-p junctions having a p-type ZnO film

with net acceptors containing arsenic (a p-type dopant) on a substrate in a pulsed laser deposition chamber, cleaning the substrate, adjusting the temperature of the substrate in the pulsed laser deposition chamber to between about 300°C to 1,000°C through various steps. Also used is a molecular beam wherein a p-type dopant is selected from the group containing aluminum, gallium, and indium and pressed ZnO powder pellets

3. Claims 43-56 are rejected under the judicially created doctrine of double patenting over claim1-24 of U. S. U. S. Patent No. 6,610,141 B2 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: Both U.S. U. S. Patent No. 6,610,141 B2 and the instant application teach a p-type ZnO film with a net acceptor and contains arsenic to be grown on a substrate. The net acceptor concentration of at least about  $10^{15}$  acceptors/cm<sup>3</sup>, cleaning the substrate, pressed ZnO powder pellets, a pulsed laser deposition chamber, a p-type dopant (i.e. Arsenic) and a n-type dopant (i.e. aluminum

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
